

Khairul Hasan

Senior Frontend Engineer

khairul.hasan.dev@gmail.com | (+880) 1940830791 | Github@khairul111010 |

LinkedIn@imkhairulhasan | [Website](#) Dhaka, Bangladesh

Skills

Frontend Development: HTML5, CSS, SCSS, JavaScript, Typescript, React.js, Next.js

State Management: Redux, Context API

Testing: Jest, Storybook, React Testing Library.

Deployment: Vercel, Heroku, Netlify, Docker

API Tools: Postman, Swagger.

Collaboration Tools: Bitbucket, Git, GitLab, GitHub, Jira, Trello, ClickUp.

Languages: English (Fluent), Bangla (Native)

Experience

Senior Frontend Developer, Wegro Global – Dhaka, Bangladesh

March 2025 – Present

- **Led System Migrations & Optimization:** Architected system upgrades and feature rollouts using **TypeScript** and the latest **React** packages, focusing on performance enhancements and Webpack configuration tuning for faster load Times. Upgraded key projects (Publisher, Passport, core platform) to **React 19**, **Next.js 15**, and the latest versions of critical packages (e.g., **Webpack**, **Babel**, **Ant Design**, and **Axios**), resolving compatibility issues and significantly enhancing performance.
- **Optimized Data Management:** Built **reusable components** (analogous to **Ant Design**) with **advanced search, filtering, and complex query capabilities** powered by **RTK Query**, ensuring high system **responsiveness** for large datasets.
- **Enhanced User Interactions and Accessibility:** Developed **infinite scrolling** functionality and implemented features like **clipboard copying**, advanced date/time functionalities, and seamless **PDF/file viewers** to boost productivity within the ERP.
- **Enabled Customization:** Implemented a **component system** that allows for dynamic configuration and presentation of financial data and reports across different user roles.

Senior Frontend Developer (Part-time), Fleetblox – Remote

November 2024 – March 2025

- **Engineered Specialized Components:** Designed advanced data **components**, including complex **custom sliders** and multi-select options, for real-time **data visualization** and filtering fleet metrics.
- **Integrated AI-Driven Solutions:** Built the UI bridge for **AI-based algorithms**, creating actionable interfaces for **optimized vehicle routing and scheduling suggestions**, significantly contributing to cost reduction.
- **Improved Scalability and Stability:** Conducted targeted refactoring and component optimization (using **Babel** for compatibility) to ensure the platform could reliably handle a high volume of active fleet units and data streams.

Frontend Engineer, Anchorblock Technology – Dhaka, Bangladesh

May 2023 – February 2025

- **Codebase Refactoring & Migration:** Restructured the flagship accounting application using **React** and **TypeScript**, updating core libraries and enhancing the architecture for improved maintainability and scalability.
- **Developed Advanced Visualization Tools:** Utilized **ApexCharts** and **D3.js** to create **dynamic and interactive visualizations**, fundamentally improving client comprehension of financial data and complex MFS metrics.
- **Enabled Customization and Automation:** Implemented dynamic component logic (analogous to **GrapesJS**) for configuring report layouts and created features to instantly automate invoice generation from raw text input.
- **Managed High-Volume Real-time Data:** Designed a **high-performance** analytics interface for a USSD monitoring tool, requiring extreme efficiency to ensure **real-time troubleshooting** for a user base of millions.

Software Engineer, **IOTA Infotech Limited** – Dhaka, Bangladesh

April 2022 – April 2023

- **Optimized Development Efficiency:** Created a custom **Redux RTK query implementation** for sophisticated state management, resulting in a measurable improvement in feature development speed and consistency across projects.
- **Engineered Complex UI Features:** Designed and implemented a unique social media feed structure that integrated diverse media types and specific user highlight mechanisms, directly **boosting platform engagement**.
- **Integrated Scalable Solutions:** Optimized core system architecture and API usage with an intelligent caching layer, resulting in **significant cost savings** on third-party service fees (e.g., Google Maps API).

Projects

WeGro ERP & Investor App

[Wegro ERP \(Staging\)](#)

- Comprehensive ERP solution transforming agricultural operations with real-time tracking, investor management, and financial reconciliation.

Anchorbooks

<https://anchorbooks.ai/>

- Cutting-edge accounting software with advanced automation, AI integration, and seamless user experience for modern businesses.

Fleetblox

<https://dev.fleetblox.com>

- AI powered fleet management system

Education

IUBAT – Bachelors in Computer Science & Engineering (CGPA - 3.53)

January 2022
